

ABSTRACT OF THE DISCLOSURE

There is provided a charging system or the like which makes it possible to reduce financial and procedural burden on a purchaser of a terminal apparatus and to also reduce procedural burden on a communication carrier. A network system N is that a communication apparatus C owned by the communication carrier, an attached terminal T of a communication type car-navigation apparatus, and a processing apparatus H owned by a seller of the communication type car-navigation apparatus are connected via a wired or wireless line L. In the network system N, a fee calculation server in the communication apparatus C calculates a fee generated by the attached terminal T performing communication via the communication apparatus C. And a charging server in the communication apparatus C performs processing for charging the calculated fee to thereby charge the seller the fee.
